

# Sylodyn® NB

## Material Data Sheet

**Material** closed cellular polyurethane  
**Colour** red

### Standard dimensions on stock

Thickness: 12.5 mm with Sylodyn® NB 12

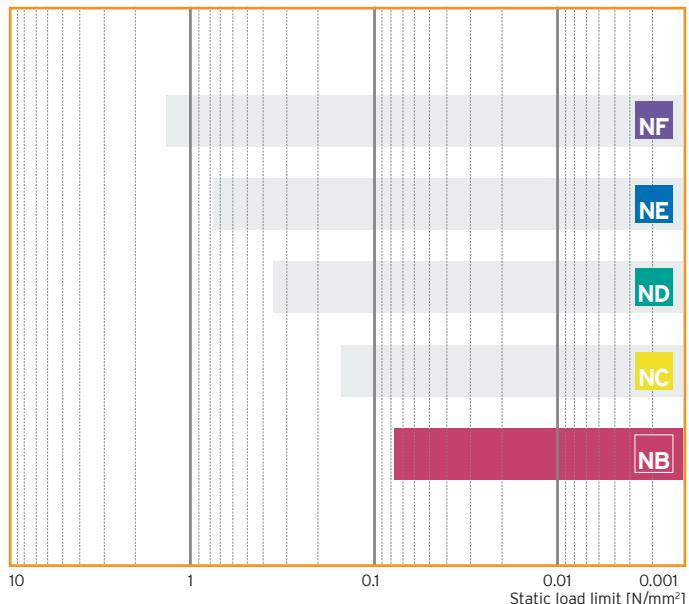

25 mm with Sylodyn® NB 25

Rolls: 1.5 m wide, 5.0 m long

Stripes: max. 1.5 m wide, up to 5.0 m long

Other dimensions (also thickness) as well as stamped and molded parts on request.

### Standard Sylodyn® range

Area of application	Compression load Deflection (depending on form factor)	
Static load limit	up to 0.075 N/mm <sup>2</sup> **	approx. 7 %**
Operating load range (static plus dynamic loads)	up to 0.120 N/mm <sup>2</sup> **	approx. 15 %**
Load peaks (short term, infrequent loads)	up to 2.0 N/mm <sup>2</sup> **	approx. 70 %**

Material properties	Test methods	Comment
Tensile stress at break	0.75 N/mm <sup>2</sup>	DIN EN ISO 527-3/5/100*
Elongation at break	450 %	DIN EN ISO 527-3/5/100*
Tear strength	3.0 N/mm	DIN 53515*
Abrasion	1,400 mm <sup>3</sup>	DIN 53516
Coefficient of friction (steel)	0.7	Getzner Werkstoffe
Coefficient of friction (concrete)	0.7	Getzner Werkstoffe
Compression set	< 5 %	EN ISO 1856
Static shear modulus	0.13 N/mm <sup>2</sup>	DIN ISO 1827*
Dynamic shear modulus	0.18 N/mm <sup>2</sup>	DIN ISO 1827*
Mechanical loss factor	0.07	DIN 53513*
Rebound elasticity	70 %	DIN 53573
Operating temperature	-30 to 70 °C	
Flammability	B2 class E	DIN 4102 EN ISO 11925-2
Specific volume resistance	>10 <sup>11</sup> Ω·cm	DIN IEC 93
Thermal conductivity	0.06 W/[m·K]	DIN 52612/1

Further characteristic values on request

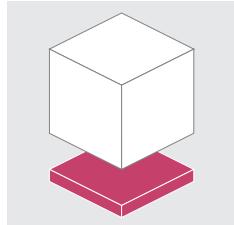

\* Tests according to respective standards

\*\* At form factor q=3

All information and data is based on our current knowledge. The data can be applied for calculations and as guidelines, are subject to typical manufacturing tolerances, and are not guaranteed. We reserve the right to amend the data.

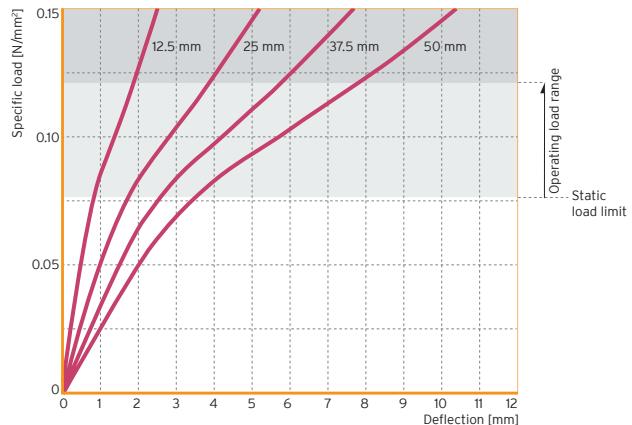

Further information can be found in VDI Guideline 2062 - Page 2.

**Full surface bearing**

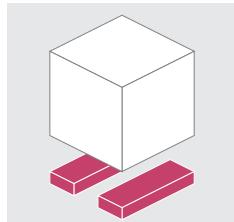

**Load deflection curve**

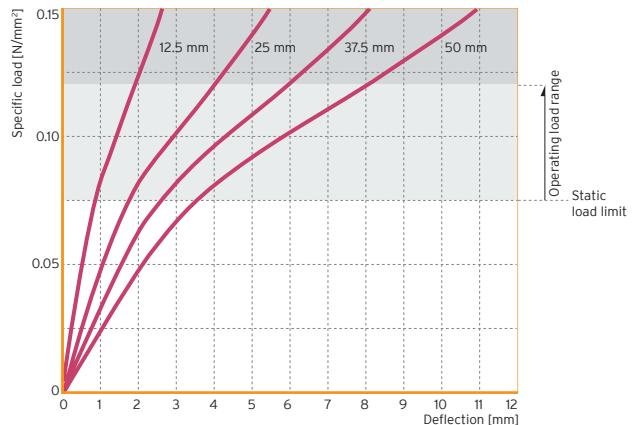

Form factor:  $q=6$

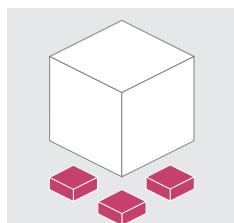

**Strip bearing**

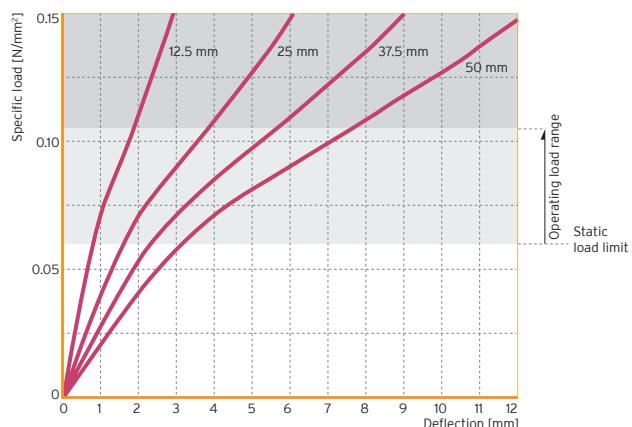

Form factor:  $q=3$

**Point bearing**

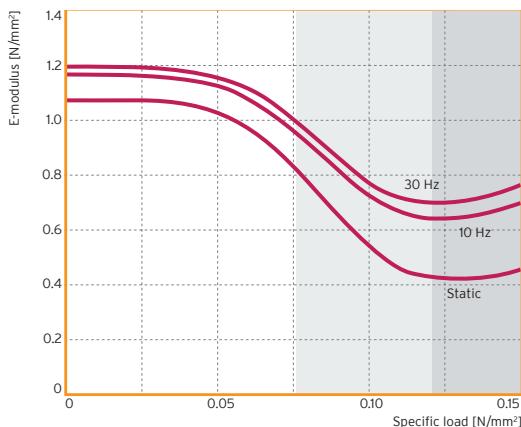

Form factor:  $q=1.5$

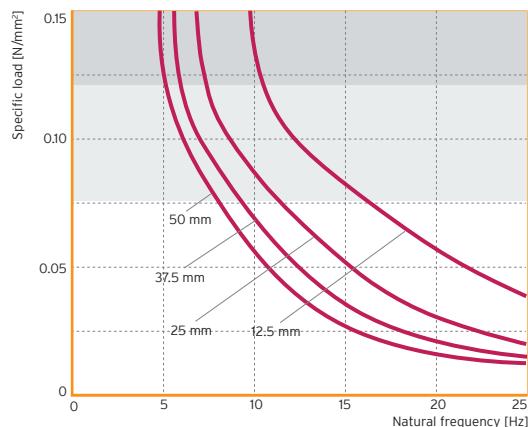

## Modulus of elasticity

Form factor: q=6

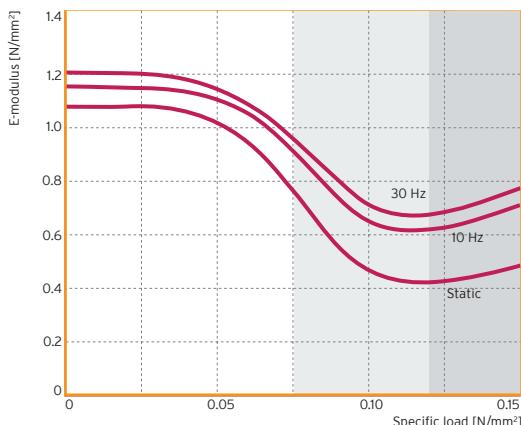

## Natural frequency

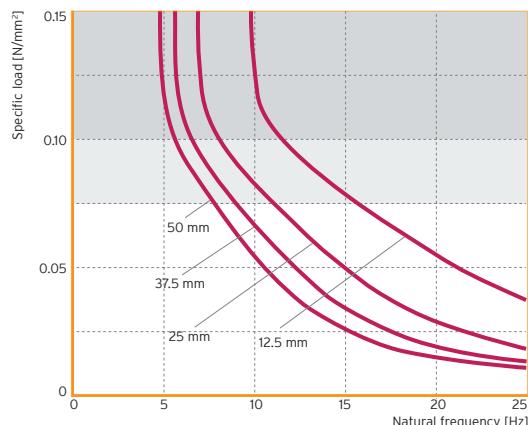

Form factor: q=6

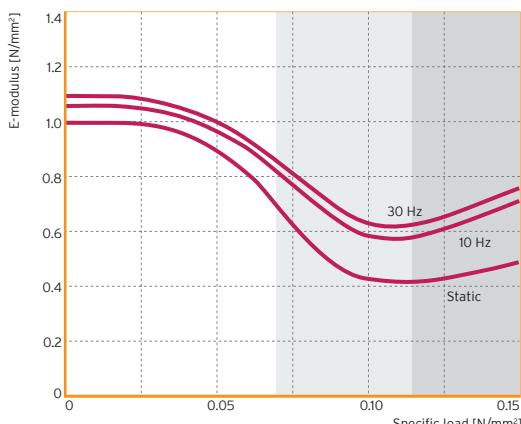

Form factor: q=3

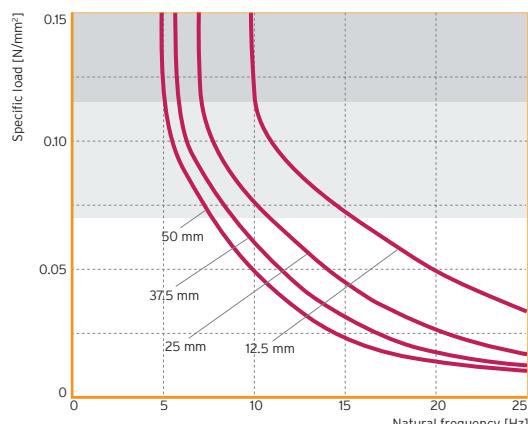

Form factor: q=3

Form factor: q=1.5

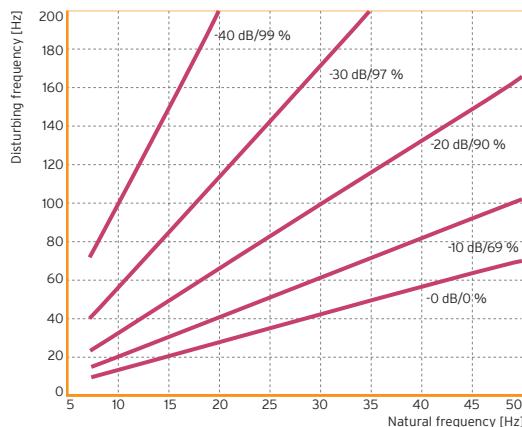

Form factor: q=1.5

Static modulus of elasticity as a tangent modulus taken from the load deflection curve; dynamic modulus of elasticity due to sinusoidal excitation with a velocity level of  $100 \text{ dBv re. } 5 \cdot 10^{-8} \text{ m/s}$ ; test according to DIN 53513

Natural frequency of a single-degree-of-freedom system (SDOF system) consisting of a fixed mass and an elastic bearing consisting of Sylodyn® NB based on a stiff subgrade; parameter: thickness of elastomeric bearing

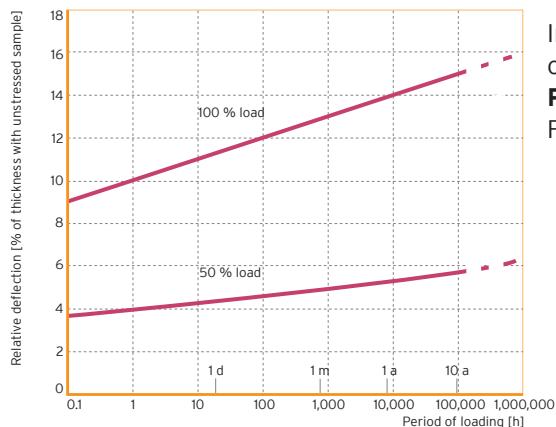

### Vibration isolation - efficiency

Reduction of the transmitted mechanical vibrations by implementation of an elastic bearing consisting of Sylodyn® NB

**Parameter:** factor of transmission in dB, isolation rate in %

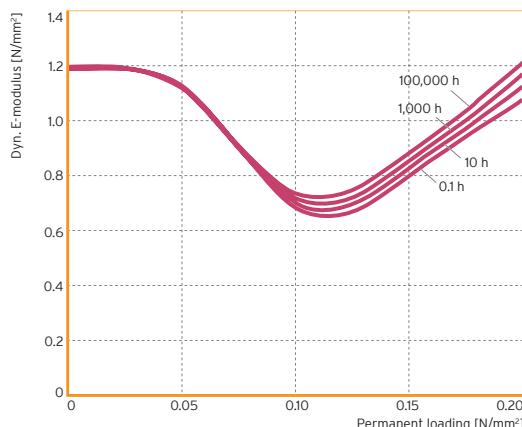

### Creep behaviour

Increase in deformation under consistent loading

**Parameter:** permanent loading  
Form factor: q=3

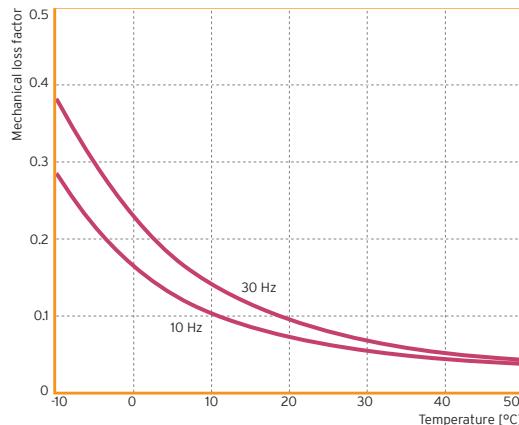

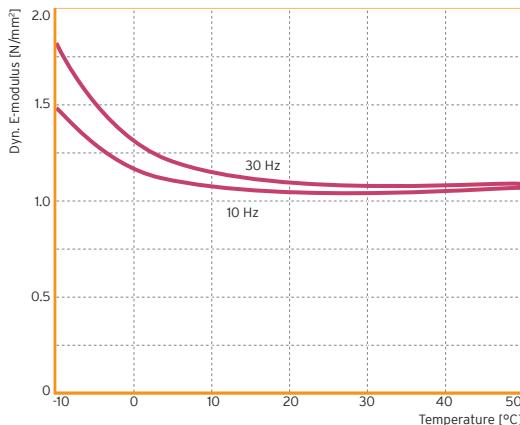

### Dynamic E-modulus at long term loading

Change of dynamic modulus of elasticity under consistent loading (at 10 Hz)

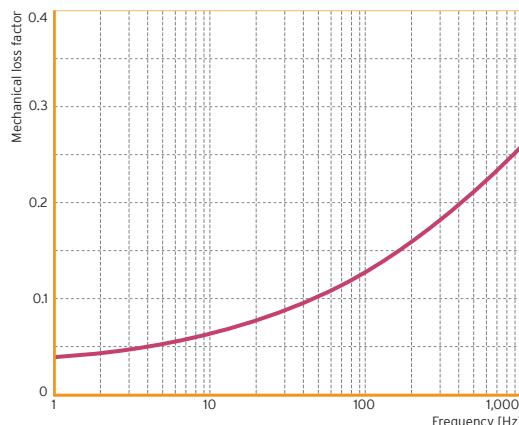

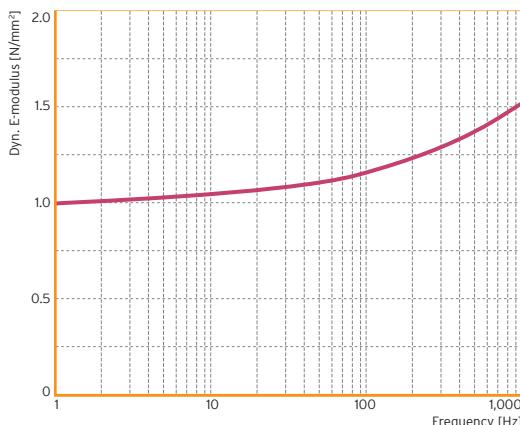

**Parameter:** load duration  
Form factor: q=3

## Temperature dependency

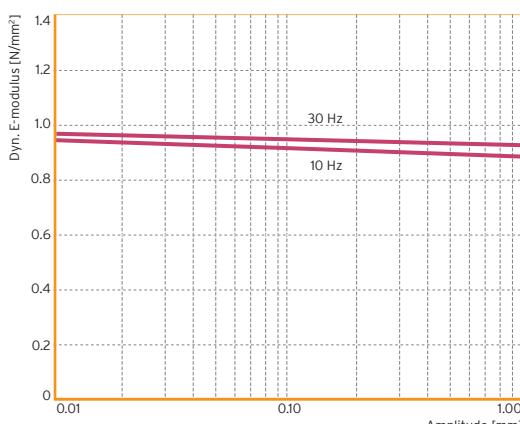

DMA-test  
(Dynamic Mechanical Analysis); tests within linear area of the load deflection curve, at low specific loads

## Frequency dependency

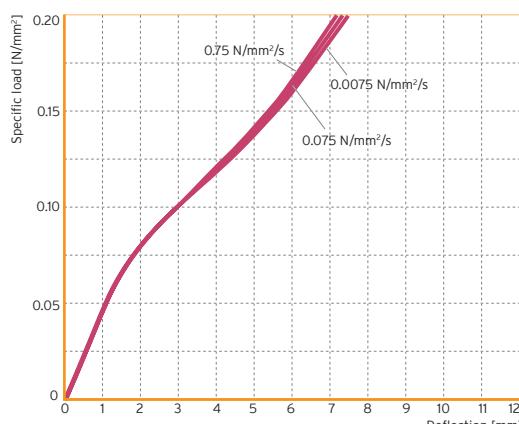

DMA-tests; mastercurve with a reference-temperature of 21 °C, tests within the linear area of the load deflection curve, at low specific loads

## Dependency on amplitude

## Dependency on loading velocity

**Dependency on amplitude:**  
preload at static load limit;  
Form factor: g=3, thickness  
of material 25 mm

**Dependency on loading  
velocity:**  
Form factor: g=3, thickness  
of material 25 mm

## Form factor

The form factor is a geometric measure for the shape of an elastomeric bearing defined as the ratio of the loaded area and the area of sum of the perimeter surfaces.

$$\text{Definition: Form factor} = \frac{\text{Loaded area}}{\text{Perimeter surface area}}$$

$$\text{For a rectangular shape: } q = \frac{l \cdot w}{2 \cdot t \cdot (l+w)}$$

(l..length, w..width, t..thickness)

The form factor has an influence on the deflection and the static load limit respectively.

## Elastic Sylodyn®-bearings are considered as

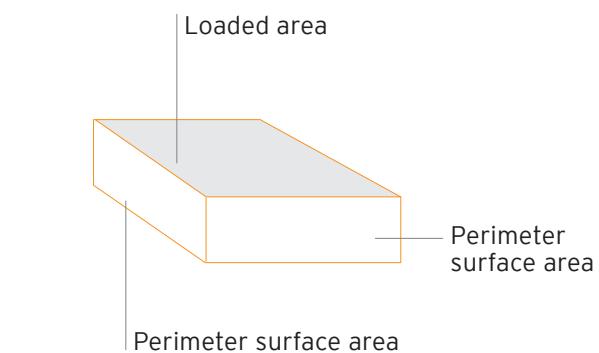

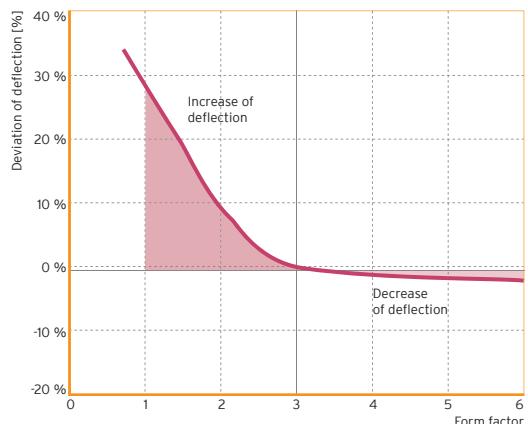

Full surface bearing: Form factor > 6

Strip bearing: Form factor between 2 and 6

Point bearing: Form factor < 2

## Influence of the form factor on the deflection at the static load limit for a homogeneous material

Reference value: Form factor  $q=3$

## Influence of the form factor on the static load limit for a homogeneous material

Reference value: Form factor  $q=3$
